

Nextflex Installation Instructions

Step 1

Use the Nextflex forming tool to bend the Nextflex heater at the center mark consistent with the tool bend.

Step 2

Hold the Nextflex heater directly above the groove at the point of installation. Strike the Nextflex heater hard to seat it well. Form and install in short lengths to prevent rebending.

Step 3

It is important when forming the Nextflex heater to keep the heater flat and the handle of the tool toward the uninstalled section. Use your free hand to hold the Nextflex forming tool steady and flat.

Step 4

It is important to make sure the Nextflex heater is directly above the groove prior to striking

Step 5

Keeping the heater flat and controlling the forming tool with your free hand bend curves so they are directly above the groove.

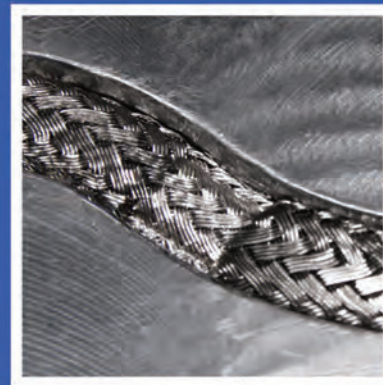

Step 6

One strong strike is more effective than two soft strikes. If your groove dimensions are correct, you will not damage the internal heater

Step 7

The Nextflex striking tool is a key component to seat the heater properly, improve heat transfer and maximize heater life. Strike hard to stake every inch \approx 25mm

Step 8

Close up photo of properly staked Nextflex.
